

Kaowool Blanket, Kaowool S Blanket, Cerablanket, Cerachem Blanket and Cerachrome Blanket are air laid into a continuous mat and mechanically needled for added strength and surface integrity. Blanket products do not contain organic binders. Thermal Ceramic Blankets provide excellent resistance to chemical attack. Exceptions include hydrofluoric acid, phosphoric acid, and strong alkalies (ie. Na_2O , K_2O). Thermal Ceramic Blankets are unaffected by oil or water. Thermal and physical properties are restored after drying.

Kaowool Blanket

Kaowool blanket is produced from kaolin, a naturally occurring alumina-silica fire clay. Kaowool, the world's most recognizable name in ceramic fiber blanket, is available in a wide variety of densities and sizes. Kaowool blanket offers excellent handleability and high temperature stability. This allows it to meet a wide range of hot face and backup insulation applications in furnaces, kilns and other equipment requiring high temperature heat containment.

Kaowool S Blanket

Kaowool S Blanket is produced from high quality spun fibers. It is available in a wide variety of densities and sizes, and offers a highly cost effective alternative to Cerablanket with its 2300°F (1260°C) maximum temperature rating.

Cerablanket

Cerablanket is produced from exceptionally pure oxides of alumina and silica using the spinning process. The resultant quality spun fibers have been optimized for high handling strength, with on average the highest tensile strength of any Thermal Ceramics ceramic fiber blanket. Cerablanket is available in a wide variety of densities and sizes. Cerablanket offers excellent handleability and high temperature stability which allows it to meet a wide range of hot face and back up insulation applications in furnaces, kilns and other equipment requiring high temperature heat containment.

Cerachem Blanket

Cerachem Blanket is a 2600°F (1427°C) maximum temperature rated refractory blanket formed from a unique, patented, spun alumina-silica-zirconia fiber. It is specially designed for applications where high fiber tensile strength, low thermal conductivity and low shrinkage are required. Cerachem Blanket is used extensively in high temperature units in the ceramic, chemical processing, and ferrous metal industries. Thermal Ceramics Cerachem refractory blankets are ideal for a wide range of hot face lining and backup insulation applications in furnaces, kilns and other high temperature equipment.

Cerachrome Blanket

Made from spun alumina-silica-chromia fiber, Cerachrome Blanket is well suited for hot face lining applications where higher temperatures are encountered, such as soaking pit covers, reheat and forging furnaces. Cerachrome Blanket with its chromia-stabilized chemistry offers improved long term shrinkage characteristics over zirconia containing blankets such as Cerachem. Cerachrome Blanket effectively fills the gap between zirconia blankets and high alumina products.

Blanket Products

Product Information

Physical Properties	Kaowool	Kaowool S	Cerablanket	Cerachem	Cerachrome
Color	tan	white	white	white	blue/green
Density, pcf (kg/m ³)	3, 4, 6, 8, 12 (48, 64, 96, 128, 192)	4, 6, 8 (64, 96, 128)	3, 4, 6, 8 (48, 64, 96, 128)	4, 6, 8 (64, 96, 128)	4, 6, 8 (64, 96, 128)
Thickness, in. (mm)	1/8-1 (3.125-50)	1-2 (25-50)	1/4-2 (6.25-50)	1/2-2 (12.5-50)	1/2-2 (12.5-50)
Melting point, °F(°C)	3200 (1760)	3200 (1760)	3200 (1760)	3200 (1760)	3200 (1760)
